## **FINAL ACTION**

### ***Status of the Claims***

1. This action is in response to papers filed 25 October 2004 in which the specification was amended, claims 1-27 were canceled and claims 28-52 were added. The amendments have been thoroughly reviewed and entered. The previous rejections in the Office Action dated 26 April 2004 are withdrawn in view of the amendments.

New grounds for rejection are discussed.

Claims 28-39 are under prosecution.

### ***Election/Restrictions***

2. Newly submitted claims 40-52 are directed to an invention that is independent or distinct from the invention originally claimed for the following reasons:

The originally examined invention and the invention of Claims 40-52 are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the newly claimed library can be made by chemical synthesis that is materially different from the nucleic acid facilitated reaction required in the examined invention.

Since applicant has received an action on the merits for the originally presented invention, this invention has been constructively elected by original presentation for prosecution on the merits. Accordingly, claims 40-52 are withdrawn from consideration as being directed to a non-elected invention. See 37 CFR 1.142(b) and MPEP § 821.03.

Art Unit: 1634

### ***Specification***

3. The amendment filed 25 October is objected to under 35 U.S.C. 132 because it introduces new matter into the disclosure. 35 U.S.C. 132 states that no amendment shall introduce new matter into the disclosure of the invention. The added material which is not supported by the original disclosure is as follows:

The first paragraph has been amended to incorporate by reference all parent applications. This incorporation by reference is improper. While Applicant is entitled to cross-reference the parent applications under 37 C.F.R. 1.78, their incorporation by reference constitutes new matter.

Applicant is required to cancel the new matter in the reply to this Office Action.

### ***Double Patenting***

4. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 28-39 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-27 of U.S. Patent No. 6,048,698.

Although the conflicting claims are not identical, they are not patentably distinct from each other because both sets of claims are drawn to methods of producing a library wherein produce

formation is facilitated by a nucleic acid coupled to a first reactant. The claims merely differ in the arrangement of limitations within the claim sets. For example, instant claim 36 defines the functional groups on the nucleic acids while patent claim 1, 11 and 21 provide the same definition of functional groups. As such, the instant methods are not patentably distinct from the patent methods.
